What you get with SilexSolar Solar Panels

Know what you're getting

Buying a solar system is an investment in the future and with SilexSolar, you know what you're getting.

Our warranty is one of the industries best - so you know we will stand behind our products.

Our expert team is right around the corner - so you know you can find us if you need to.

Our offer is simple – high quality, Australian made solar cells and panels.

Who is SilexSolar?

SilexSolar is Australia's only commercial solar cell and panel manufacturer. We develop and produce high quality solar panels at our Sydney Olympic Park NSW factory.

Our panels are made for domestic and commercial applications and have been internationally certified by VDE/TÜV and conform to strict European directives.

Before manufacture, we spend countless hours conducting research and development here in Australia, so we know the designs are perfectly suited to Australian conditions.

We make our own solar cells from mono crystalline silicon wafers. Our processes include high purity conductive silver pastes and advanced surface treatments to absorb more light and produce more power.

The solar cells are graded and assembled using robotic assembly equipment. We laminate the entire assembly together creating a weatherproof lifetime seal, ready for final assembly and testing.

Finally, our solar products are tested using calibrated equipment and then packed into system sized packages, ready for transport to your roof.

When you purchase SilexSolar panels you are investing in your own energy independence, Australian jobs and an Australian company.

SilexSolar SLX Panels

Each and every SilexSolar panel undergoes the most rigorous testing to international standards, to ensure reliable, long term performance. Every model we produce is certified to comply with stringent safety and performance standards, including hail impact, thermal cycling, wind loading and of course are Clean Energy Council approved.

The SilexSolar SLX series of solar panels use mono crystalline cells incorporating anti-reflective coatings on the cells and glass. Three super-efficient bypass diodes are used to protect the cells in case of shading, maximise life expectancy and avoid unnecessary losses. We even use a highly unique passive cooling junction box that further protects the diodes and connection cables, ensuring long and trouble free life.

From the factory to your roof

SilexSolar understands that fast and simple service reduces costs for everyone. That's why we supply Australian solar retailers direct from our factory. We carefully select our retailers to ensure they are Clean Energy Council accredited.

Our retailers will cleverly design your system using components to match your SilexSolar panels and to suit your home – making sure you get the most out of your system.

They'll help you with all the paperwork including applying for rebates or arranging meter connections so you can start making money from the day your system is installed.

Once it's all installed we are still just around the corner. We don't just offer class leading product warranties; we support our retailers if they need to come back to your home.

Now that's confidence.
